EDUCATION

Jadavpur University

Electronics and Telecommunication Engineering
3rd Year, 6th Semester

2023 – 2027

Kolkata, India

The Newtown School

Senior Secondary (XII) - Science(CBSE) - Percentage - 94.6%

2023

Kolkata, India

The Newtown School

Secondary (X) - (CBSE) - Percentage - 94.44%

2021

Kolkata, India

EXPERIENCE

Custom Associate Software Engineering Intern | Accenture

05 2026 - 07 2026

- Assisted in the delivery of enterprise networking initiatives by applying networking and software engineering concepts to real-world business use cases within a global consulting environment.
- Partnered with project leads, mentors, and peers to analyze requirements, document findings, and support project execution, enhancing both technical and professional consulting skills.
- Demonstrated rapid learning agility by successfully completing structured Enterprise Networks training and applying acquired knowledge to project discussions, technical documentation, and solution analysis.

Summer Research Intern | Indian Institute of Technology, Guwahati

05 2025 - 07 2025

- Developed and implemented real-time use cases on a 5G testbed, gaining hands-on experience with advanced wireless technologies.
- Conducted research on joint active and passive beamforming design for reconfigurable intelligent surfaces-aided integrated sensing and communication systems.

PROJECTS

AI-Based Personal Style & Body Analysis System

01 2026 – Present

- Developing an AI-powered web application that analyzes facial structure, skin tone, and body proportions to suggest personalized fashion and styling recommendations.
- Implementing Computer Vision models using CNN architectures for face shape detection and skin tone classification.
- Integrated a React-based frontend with a Flask backend for real-time image processing and recommendation generation.

Smart Restaurant Food Demand Prediction System

09 2025 – 11 2025

- Built a machine learning model to predict daily food demand using historical sales and seasonal trend data.
- Applied regression models and time-series forecasting techniques to minimize food wastage.
- Developed an interactive Streamlit dashboard for restaurant owners to visualize predictions and inventory insights.
- Improved prediction accuracy by performing feature engineering and hyperparameter tuning.

AI enabled Joint Beamforming in Wireless Networks | LTE, 5G Networks, RIS

11 2025 – Present

- Simulated RIS-enabled multi-user MIMO Beamforming system at 28 GHz using MATLAB.
- Analyzed and visualized SNR improvements through charts and heatmaps for optimal RIS deployment.
- Developed an AI enabled Machine Learning model based on Reinforcement Learning to enhance the signal strength in a MIMO system and reduce the Blackout zones in the signal propagation model.
- Done under the guidance of Prof. Iti Saha Misra.

Technical Skills

Languages: Matlab, Python, C++, HTML, CSS

Developer Tools: NetSim, Matlab, Multisim, Simulink, VS Code, Arduino, Raspberry Pi

Technologies/Frameworks: GitHub, IoT, Embedded Systems, Network Models, Machine Learning

Extra-Curriculars

AstroSci Club : Head of Administration

Maths Society : Vice-President
